PROFESSIONAL SUMMARY

Scrum Master and Agile Delivery Professional with 5+ years working in Salesforce GTM systems. Currently at UKG, running delivery for the GTM team while staying hands-on across the full lifecycle — requirements, solutioning, automation strategy, and release. Own the GTM automation approach end-to-end, deciding what gets automated and building the frameworks the team works from. Background spans Selenium Java, Playwright (POC lead), AI agents (ChatGPT, Copilot), and Python tooling. The combination of technical depth and delivery ownership is what makes engineering conversations productive and sprint commitments realistic. Working towards Delivery Manager and Program Lead roles.

CORE COMPETENCIES

Delivery & Agile Leadership

Delivery Leadership & Ownership · Scrum Master · Release Planning & Delivery Accountability · Sprint Planning & Roadmap Management · Cross-Team Coordination & Stakeholder Alignment · Risk Management & Dependency Resolution · Program & Portfolio Delivery

Automation Architecture & Quality

Automation Strategy & Architecture · Framework Design & Ownership · Playwright (POC Lead) · Selenium Java · Regression & Release Validation · Quality Risk Identification · CI/CD Integration

Salesforce & GTM

Salesforce GTM Platform Delivery · Salesforce Sales Cloud · Salesforce Financial Services Cloud · Salesforce Agentforce · Salesforce Integrations (Seismic) · Apex Programming

Tools & AI

JIRA & Azure DevOps · AI Agents (ChatGPT, Copilot) · Python Scripting & Tooling · Provar & VS Code · TestRail

PROFESSIONAL EXPERIENCE

Senior IT Software Engineer

UKG (Ultimate Kronos Group)

Noida, Uttar Pradesh, India · Hybrid

Dec 2025 – Present

6 months

Scrum Master for the GTM team, working across delivery, automation strategy, and tooling on Salesforce Lead-to-Opportunity workflows.

- ▶ Run delivery as Scrum Master — sprint planning, backlog management, dependency tracking, and making sure the team ships what it commits to
- ▶ Own the GTM automation approach — decide what gets automated and in what order, and build the frameworks the team works from
- ▶ Sit in requirements discussions when there are gaps, working through feasibility with engineering before stories are finalised
- ▶ Built AI agents on ChatGPT and Copilot to cut down team overhead; wrote a Python tool to migrate the full test suite from TestRail to Azure DevOps
- ▶ Leading a Playwright POC to evaluate whether it's a better fit for the pipeline than the current framework

IT Software Engineer

Dec 2024 – Dec 2025

UKG (Ultimate Kronos Group)

1 year

Noida, Uttar Pradesh, India · Hybrid

Worked across automation, delivery, and solutioning for the GTM team — building the technical and delivery habits that carried into the senior role.

- ▶ Took part in backlog refinement with Product, BAs, and Engineering to make sure stories were clear and ready to build before sprint start
- ▶ Built and maintained UI and API automation across GTM workflows, which helped stabilise releases and reduced the manual testing load
- ▶ Got into solutioning conversations with developers regularly — useful for catching scope gaps early and keeping estimates realistic
- ▶ Flagged risks and blockers early in sprints rather than waiting for them to surface at the wrong moment

Quality Engineer

Nov 2022 – Dec 2024

LTIMindtree

2 years 2 months

Bengaluru, Karnataka, India · Hybrid

Quality Engineer on Salesforce Sales Cloud and Financial Services Cloud for Lincoln Financial, working across automation, delivery, and GTM workflows integrated with Seismic.

- ▶ Responsible for quality across Salesforce Sales Cloud and FSC releases — multiple feature tracks running at the same time, all needing to be release-ready
- ▶ Built a 300+ test suite in Selenium Java covering UI and integration flows; made a visible difference in post-release defect rates
- ▶ Involved early in requirements reviews with developers, BAs, and stakeholders — catching issues before they made it into builds saved a lot of rework
- ▶ Plugged into CI/CD pipelines for environment validation and was a regular part of sprint ceremonies from planning through to retros

Test Engineer

Jun 2021 – Nov 2022

Mindtree

1 year 6 months

Pune District, Maharashtra, India · Hybrid

Started as a Test Engineer on Salesforce Sales Cloud and Marketing Cloud, picking up the fundamentals of quality, automation, and Agile delivery.

- ▶ Ran functional and regression testing across Salesforce releases — keeping things stable when configuration was changing frequently
- ▶ Worked with developers, BAs, and stakeholders to understand workflows and catch gaps early rather than discovering them mid-sprint
- ▶ Built reusable automation scripts for Salesforce flows, which reduced manual effort and made release cycles more consistent
- ▶ Contributed to sprint planning and backlog discussions from a quality angle — flagging what was testable, what wasn't, and what needed more clarity

CERTIFICATIONS

Salesforce Certified Sales Cloud Consultant

Salesforce · Issued Feb 2026 · ID: 7450870

Scrum Master Certified (SMC)

Scrum Alliance · Issued Sep 2025 · Expires Sep 2027 · ID: 001726206
